Profile

Computer science student building projects in data analysis, machine learning, and frontend development. Comfortable working with Python for analysis and React for simple web interfaces.

Skills

Languages: Python, JavaScript, SQL

Libraries & Tools: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, React, Vite, Git, GitHub

Concepts: Exploratory Data Analysis, Data Cleaning, Regression, Visualization, Basic Full-Stack Development

Projects

Car Resale Analytics

Academic Project

Python, Pandas, Scikit-learn

- Worked on a used car dataset with 179,490 records from multiple Indian cities.
- Built regression-based models to study how age, fuel type, transmission, and kilometers driven affect resale price.
- Cleaned data, handled missing values, and prepared visual summaries to explain price trends.

Video Game Sales Analysis

Academic Project

Python, Pandas, Matplotlib, Seaborn

- Analyzed a video game sales dataset of about 16,000 records.
- Compared sales across regions, platforms, and genres using exploratory data analysis.
- Created charts and simple insights to highlight market patterns and popular categories.

Personal Portfolio Website

Personal Project

React, Vite, Tailwind CSS, Framer Motion

- Built a personal portfolio site to present profile details, links, and selected projects.
- Added project cards, search/filter behavior, and a responsive layout using React components.
- Deployed the site online for sharing work and contact information.

Education

Rishihood University

Expected 2025–2026

Computer Science / Engineering Studies

- Relevant coursework: Data Science, Machine Learning, Database Management, Web Development
